## Hartson & Kennedy Post Form Counter Top Information Sheet

### **Product ADVANTAGES:**

#### **Horizontal Grade Laminate:**

Horizontal grade laminate is kitchen counter top grade. The top plastic surface is thicker, more durable and maintains its finish longer.

Other post form companies only use vertical grade laminate which is intended for light duty wall applications where wear is not an issue. The top plastic surface is thinner, less durable, wears quicker and is NOT recommended for horizontal surfaces.

#### **Industrial Grade Particle Board:**

3/4" 45 lb. industrial grade particle board reduces warping, twisting and screw pull outs. The surface is smoother allowing the laminate to adhere better with fewer imperfections.

Other post form companies use an inferior 40 lb. particle board. This particle board is typically thinner which increases the chances of warping, twisting and screw pull outs. Laminate adhesion failure is common with this product.

#### **MDF Scribe:**

3/8" medium density fiber board is easy to sand and shape to fit the contour of the wall. MDF is glued on with no nails or staples and allows for a professional installation.

Other companies use particle board in which some is nailed, stapled and glued on. Particle board is harder to sand and shape which requires more work to achieve a professional installation.

#### **Warranty:**

**2 year limited warranty. Ask for a copy from your dealer.**

Other companies offer either a 1 year limited or NO warranty. Most of these products are made outside of the United States. Products imported usually have a longer lead time than products made within the USA.
