

Postform w/ Butt Joints

- Butt joints on postform **will not** line up perfectly.
- Each postform blank needs to be treated as an individual, because not every blank is exactly the same.
- The top cove in the backsplash, the bottom cove in the backsplash, and the front roll could be different than the top it is matched up with.
- The difference in these could be $3/16^{\text{th}}$ of an inch.

If ordering a postform bartop that requires an assembled butt joint in it, please specify which side they would like to line up smoothly and we will do the best we can.

Please know that we do go through our inventory and try to pick the best match we can for each situation; however there is no guarantee that we can make it perfect.

Please advise the customer of this when ordering.
